

The four relay outputs are replaced by opto-isolated open-collector 30V 100mA transistors. The 4 outputs are fully isolated from each other.

This drawing shows all emitters commoned and external pull-up resistors to an external power supply.

The dotted-lines shows the choice of using the excitation output on terminals 15 (+) and 16 for switched voltage output. The voltage can be 20V or 8Vdc (depending on input option)
